

Climate change is the most urgent global environmental challenge of our time. We must be bold and accelerate decarbonisation to leave future generations a healthy, stable planet.*

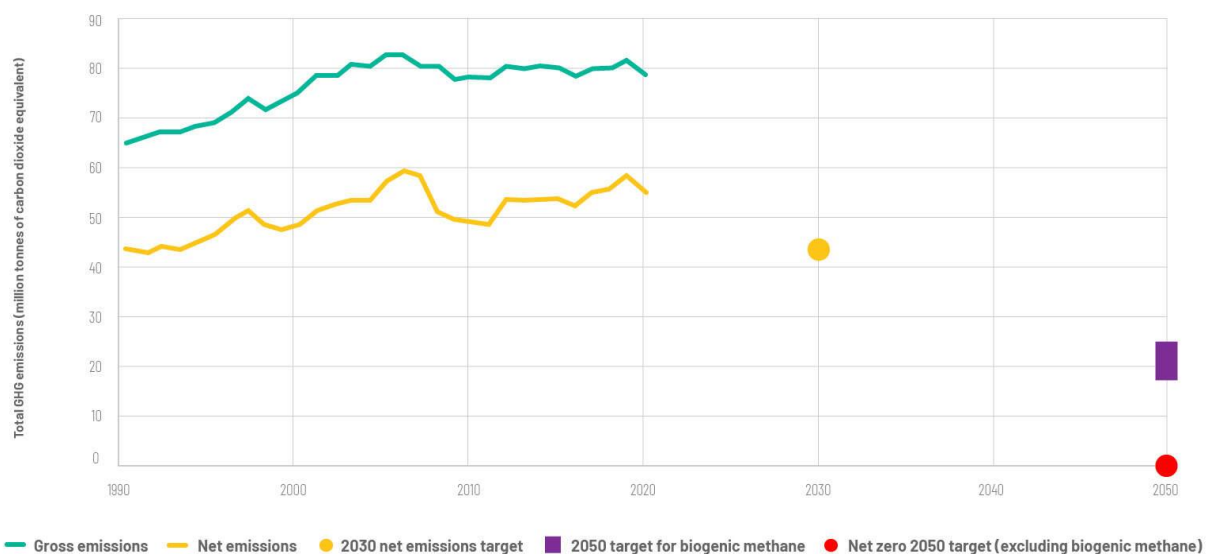

A snapshot of New Zealand's emissions*

How New Zealand is tracking*

New Zealand has a commitment to reaching net-zero carbon emissions by 2050. We've also committed to reducing emissions to 50% below 2005 levels by 2030.

While emissions are projected to decrease between now and 2050, we need to ramp up our climate response to meet the 2050 target.
